Title: Designing the Future of Food Delivery: Crave Choice UI/UX Case Study.

I'm thrilled to share my latest project, Crave Choice! The goal was to revolutionize the user experience by focusing on time-specific cravings.

The app features a streamlined sign-in process that immediately divides the user journey into two distinct sections: Snacks and Food, catering to immediate needs, whether it's a mid-afternoon break or a full meal.

My research included a comprehensive competitor analysis of Swiggy and Zomato. The analysis revealed that while they offer vast options, they lack specific focus on local specialties. To resolve this, the interface features dedicated sections highlighting particular shops known for specific items like coffee or tea.

For the design system, a strict color palette of red, orange, and green was chosen because these colors are known to stimulate appetite and excitement. Orange was specifically selected for its vibrant energy and ability to capture the playful, craving-based intent of the application.

I am currently open to freelance UI/UX design projects and collaborations. Feel free to reach out to discuss your design needs.
